

SharePoint Healthcheck

Maintenance is an essential part of running a healthy SharePoint farm. There's a range of things to do to take care of the health of your farm.

SharePoint Healthcheck

Maintenance is an essential part of running a healthy SharePoint farm. There's a range of things to do to take care of the health of your farm. Having worked with SharePoint since our foundation in 2005, Spanish Point have the customer experience and technical expertise to assist you.

The SharePoint Healthcheck includes:

- ◇ Checking the servers event logs
- ◇ Reviewing SharePoint trace logs
- ◇ Monitoring the SharePoint farm with standard and Spanish Point tools
- ◇ Checking the latest updates and patches are installed

As part of your SharePoint Healthcheck, you will receive a detailed, and concise report that outlines the remedial steps required to fine tune your SharePoint platform and ensure any issues are addressed.

Typical effort required is:

<i>Small Farm</i>	Single SharePoint server	1.5 Days
<i>Medium Farm</i>	One web front, one application server	2 to 2.5 Days
<i>Large Farm</i>	2 front ends, 2 application servers, 2 search servers	3 to 4 Days

Just like most things in life, your SharePoint farm also needs a regular health check. Keeping your environment organised, your servers healthy and your documents audited should be routine.

The SharePoint Healthcheck will be delivered by one of our senior SharePoint consultants. If you have any questions or you would like to order a Healthcheck please call on 01 652 2000 or send an email to sales@spanishpoint.ie
